

Filtration up to 150°C

Filter media for

- separation of solids from gases up to a temperature of 150°C
- separation of aerosols from gases

Whether for filtration of products or de-dusting exhaust air, SOLTA®FILT offers a wide range of different filter media:

- specially adapted filter media for CIP filters
- filter media for fine dust filtration
- antistatic filter media to avoid electrostatic charges
- additional equipment such as hydrophobic and oleophobic properties, PTFE or NANO throughout the entire material depth
- pleatable filter media
- surfaces adjusted to the application (e.g. coatings)
- oil mist separation
- customer-specific filter media

Specifications

weights	from 300 g/m ² to 1400 g/m ²
air permeabilities	from 60 l/dm ² x min to 1700 l/dm ² x min
forms of delivery	rolled goods
material	polypropylene, polyester or special fiber types
filter media which deviate from the standard are available upon request
